SSH Science Scope Volume 2: "Let's make a mathematical model!" (2018.8.23)

The Science Scope Vol.2 was hosted by Mr. Yamauchi from Mathematics Department. Kyuyo students challenged making a mathematical model in this program. We cut eight of the same-sized rectangular equilateral triangles out from a paper, which we stuck on the backbone configuration of proteins linkage. We played with it making into reversible. Mr. Yamauchi talked about a history of a mathematical model. For some students, it was surprising that there is mathematics that doesn't require curriculum. We learned and enjoyed how to make a mathematical model through this workshop.
