#15: SSH Research Presentation

On February 4th, there was a presentation by the second grade's math-science course students. Some have continued their research from 1st grade, and some had changed their research during 2nd grade. Having been chosen from a selection of students in the school, every group did well. Now, students will make changes, write papers, and apply for contests. Please work hard until the end. I think they are a good example for the 1st grade students.

#16: Science Dialogue in 2017

On February 22nd, during 5th and 6th period, we had Science Dialogue during our SSH Research II class. This is a project in which excellent young foreign scientists are sent to Japanese high schools by the Japan Society for the Promotion of Science (JSPS). The scientists gave a lecture about their study in English. At the beginning of the lecture, the scientists talked about their hometowns. Kyuyo students could not only deepen their interests in science, but also their international understanding. This time, the subjects of this program were Medicine, Biology, Engineering, and Agriculture. Four doctors and three interpreters came to our school for this program.
