6 Lecture about the Good Use of Kyuyo Meteorological Observatory: Elementary and Intermediate Course

From July 11th through 15th, Mr. Takayama and Mr. Ganeko, Kyuyo High School earth science teachers, gave a lecture about the method of using the Kyuyo meteorological observatory to the seven classes of the first grade.

The Kyuyo Meteorological Observatory is familiar to second and third year students. The two teachers explained about weather and how to monitor it thoroughly. We had only a few typhoons this summer. So many people had passed by the monitor without watching it. However, we hope students will understand how to use the monitor and be familiar with it.

#7 SSH Science English Lecture

On July 26 after school, we had a SSH science English lecture, called “The Study of Protein and Cancer,” in the laboratory. Ms. Rinawati Puruda Endan, who is a research fellow at OIST, talked about her study and answered students’ questions.

Ms. Endan told us about Indonesian culture and she also showed the reason why she came to OIST at the the beginning of the lecture. Then she talked about the relationship between the cancer and “EGFR.” The expected time of the lecture was until 5 o’clock. She was very kind to answer our questions with a smile even though there was not enough time left.

"The students are very smart. This study is very difficult to understand but they gave us a lot of questions. So we had a lot of fun!!" We received these words as a compliment.

<Comments from a student>

- It was so wonderful!!!
- The science English was so difficult, but I could understand some parts of presentation and enjoy it.
