## #4 SSH Science English Lab

Science English Lab was held on Friday, June 22 during which our school had the parent-teacher-student meeting. We had four teachers: Mr. Bojan Brink, Ms. Demi Yoshimoto, Ms. Nina Shao and Mr. Brett Shintani. We enjoyed conducting science experiments with the four teachers. The teachers explained the experiments in English and students who were confused at the beginning could talk in English and conduct the experiment during this event. This made the event a meaningful one which also fulfilled its aim of having students actively use English. We were absorbed in conducting experiments, so it took long time to do it and the event ran overtime. Nevertheless, it felt like a very short time.

## #5 SSH Science English Lecture

On July 26 after school, we had a SSH Science English lecture, called “The Study of Protein and Cancer,” in the laboratory. Ms. Rinawati Puruda Endan, who is a research fellow at OIST, talked about her study and answered students’ questions.

Ms. Endan told us about Indonesian culture and she also showed the reason why she came to OIST at the the beginning of the lecture. Then she talked about the relationship between the cancer and “EGFR.” The expected time of the lecture was until 5 o’clock. She was very kind to answer our questions with a smile even though there was not enough time left.

"The students are very smart. This study is very difficult to understand but they gave us a lot of questions. So we had a lot of fun!!" We received these words as a compliment.

<Comments from a student>

- It was so wonderful!!!
- The science English was so difficult, but I could understand some parts of presentation and enjoy it.
