#19 Science English Poster Presentation

On March 15th, Science and Mathematics Course Students held an English Poster Presentation at the gym in our school. They had been working on their English Posters since October. They made their posters and practiced presentations so hard. The content of their research is so difficult to translate into English that they had had a difficult time to do so. However, they finally succeeded in completing their posters and making their presentations in front of audience.

English Department invited 1st year students from the Science and Mathematics Course and 2nd year students from the International English Course for their audience. They listened the presentations seriously and asked many questions. Some of them wrote comments as follows: "They made a presentation in English and answered questions in English. I thought it was wonderful." "I thought it was important for us to learn English. I got interested in an experiment of alcohol fermentation." The audience discovered and learned new things by participating in this event.

The English teachers were very glad to see them giving presentations with confidence. Mr. Bojan Brink and Ms. Jennie Li, who are the FLT and ALT in Kyuyo High School, gave them some comments as follows: "I think you are doing much better than last year." "We are very proud of you. You achieved your goal. You should be proud of yourselves." All the English teachers are proud of their efforts. We all hope you will make good use of this experience in the future and try your best for communicating in English. Good job for all Science and English Course Students in 2017!
